DETAILED ACTION

Information Disclosure Statement

1. The information disclosure statement filed on June 10, 2002 fails to comply with 37 CFR 1.98(a)(2), which requires a legible copy of each U.S. and foreign patent; each publication or that portion which caused it to be listed; and all other information or that portion which caused it to be listed. It has been placed in the application file, but the information referred to therein has not been considered. The two Taiwanese patents, 388908 and 388059, were listed on the IDS but the patents were not provided.

Election/Restrictions

2. Claims 7-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method of manufacturing there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 7.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Kyoichi (JP 06227381).

In regard to claim 1, the Kyoichi reference discloses a gas discharge lamp with a light emitting tube (abstract). The lamp has a pair of electrodes (Figure 1, element 2a and 2b) opposed to each other inside the tube and sealing portions for enclosing the metal foils (Figure 1,

Art Unit: 2879

Element 5). The foils are electrically connected to the electrodes and to the external leads (Figure 1, Element 6). The external leads are connected to the nickel leads by a nickel sleeve (Figure 1, Element 7 and 8). This process incorporates welding, which creates plastic flow.

In regard to claim 2, the Kyoichi reference discloses that the external lead and the nickel lead are connected by a nickel sleeve, which is cylindrical in shape (Figure 1, Element 8).

In regard to claim 3, the Kyoichi reference discloses that the external leads are made of molybdenum (Column 4, Line 6) and the sleeve is made of nickel, which is a softer material than the molybdenum.

In regard to claim 4, the Kyoichi reference discloses that the sleeve is made of nickel, which has oxidation resistant properties.

In regard to claim 5, the Kyoichi reference discloses a gas discharge lamp with a light emitting tube (abstract). The lamp has a pair of electrodes (Figure 1, element 2a and 2b) opposed to each other inside the tube and sealing portions for enclosing the metal foils (Figure 1, Element 5). The foils are electrically connected to the electrodes and to the external leads (Figure 1, Element 6). The external lead and nickel lead are integrally fused by the nickel sleeve (Column 4, Lines 7-8).

In regard to claim 6, the discharge lamp has a reflecting mirror (Figure 1, Element 4).
